

TABLE 1
Regression Analysis: Mean Modal
Productive Age of Creative Writers

Independent Variable	<i>b</i>	β	STD Error	F
Constant				
(Western Imaginative Prose)	42.713		9.866	
Imaginative Poetry (P)	-3.910	-0.161	1.228	10.141 ^b
Informative Prose (I)	1.858	0.063	1.870	0.987
Near East (N)	0.872	0.016	4.634	0.035
Far East (F)	-0.917	-0.022	2.767	0.110
Eminence (E)	0.767	0.216	0.285	7.226 ^b
Longevity (L)	0.279	0.339	0.064	19.153 ^b
Time (T)	0.282	0.162	0.150	3.518
P × N	4.904	0.052	7.139	0.518
I × N	5.434	0.072	5.875	0.856
P × F	6.009	0.080	4.079	2.171
I × F	9.790	0.088	6.211	2.485
P × L	0.011	0.010	0.078	0.020
I × L	0.050	0.024	0.115	0.188
P × E	-0.402	-0.079	0.344	1.363
I × E	-1.404	-0.166	0.527	7.106 ^b
N × T	-0.209	-0.013	1.140	0.034
F × T	-0.740	-0.090	0.440	2.825
N × L	0.491	0.128	0.231	4.519 ^a
F × L	0.087	0.020	0.188	0.211
N × E	-1.040	-0.069	1.113	0.872
F × E	0.026	0.003	0.470	0.003
P × T	-0.110	-0.044	0.180	0.373
I × T	0.374	0.110	0.220	2.897

NOTE: Both unstandardized (*b*'s) and standardized (β 's) regression coefficients are given, along with the standard errors and the F-tests. $R^2 = 0.368$, $F = 10.004$ with 23 and 396 df.

a. $p < .05$.

b. $p < .01$.
